# Virtual Categories

- Server virtualization (Common Reference)
  - Hypervisor Type 1 (Native / Bare metal)
  - Hypervisor Type 2 (Hosted)
- Desktop virtualization (Next Wave)
- Cloud (Future Wave)

# Why Virtual – Client Perspective

## State of Infrastructure Today

### Server Sprawl

- > **36M** physical x86 servers by 2011<sup>1</sup>— **a ten-fold** increase in 15 years<sup>1</sup>
- > **\$140 bn** in excess server capacity - a 3-year supply<sup>2</sup>

### Power & Cooling

- > **50c** for every \$1 spent on servers<sup>2</sup>
- > **\$29 bn** in power and cooling industry wide<sup>2</sup>

### Space Crunch

- > **\$1,000** / sqft<sup>2</sup>
- > **\$2,400** / server<sup>2</sup>
- > **\$40,000** / rack<sup>2</sup>

### Operating Cost

- > **\$8** in maintenance for every \$1 spent on new infrastructure<sup>2</sup>
- > **20-30 : 1** server-to-admin ratio<sup>3</sup>

# Why Virtual – Client Perspective

## State of Infrastructure with Virtualization

	BEFORE VMware	AFTER VMware	SAVINGS
Servers	1000	80	\$5,816
Network Switches	84	10	\$296
Power (kWh)	407	52	\$759
Cooling (kWh)	509	64	\$949
Real Estate (Sq ft)	2053	257	\$431
Total Savings (Over 3 years)			\$8,251*

\* Note: Savings include estimated cost of VMware licenses, Support and Subscription

# Why Virtual – Integrator Perspective

## Instant Provisioning

# Comparison

## Virtual Server

- Supports Green objectives
- Enables Space Management
- Flexibility / Share Resources
- More Complex / Costly for Smaller Solutions?
- Difficulty in Monitoring / Management
- Vendor “Support”

## Virtual Desktop

- Thin Client Support
- Quick Desktop Provisioning / Replacement
- Centralized App Mgmt.
- High Reliability / Quick Recovery
- Built-in Redundancy
- HMI Sharing

# Comparison

## Virtual Server

- Consolidation
- Self Hosted & Self Managed
- Highly Secure and Compliant

## “Private” Cloud

- Elastic / Self-Service Platforms
- Self-hosted
- Catalog Based Services
- Chargeback Models
- More secure than Hybrid or Public / Shared Clouds
- ? Compliant ?

# Vendor Support

Is accurate timing important?

*The virtualized system clock is directly affected by resource utilization on the physical host system. The more heavily-utilized the physical system is, the less reliable the virtualized system clock becomes. The result is a virtual system clock that slows and accelerates relative to real-time.*

# Vendor Support

*<vendor> Technical Support will not require clients running on VMWare ESX to recreate and troubleshoot every issue in a non-virtualized environment; however, <vendor> does reserve the right to request customers to diagnose certain issues in a native operating system environment, operating without the virtual environment. <vendor> will only make this request when there is reason to believe that the virtual environment is a contributing factor to the issue.*

localhost.gap5.com VMware ESXi, 4.0.0, 208167 | Evaluation (51 days remaining)

Getting Started Summary Virtual Machines Resource Allocation Performance Configuration Users & Groups Events Permissions

### General

Manufacturer:	Dell Inc.
Model:	PowerEdge T610
CPU Cores:	8 CPUs x 1.994 GHz
Processor Type:	Intel(R) Xeon(R) CPU E5504 @ 2.00GHz
License:	Evaluation Mode
Processor Sockets:	2
Cores per Socket:	4
Logical Processors:	8
Hyperthreading:	Inactive
Number of NICs:	2
State:	Connected
Virtual Machines and Templates:	0
VMotion Enabled:	N/A
VMware EVC Mode:	N/A
FaultTolerance Enabled:	N/A
Active Tasks:	
Host Profile:	N/A
Profile Compliance:	N/A

### Resources

CPU usage: **50 MHz** Capacity 8 x 1.994 GHz

Memory usage: **943.00 MB** Capacity 24563.55 MB

Datastore	Capacity	Free	Last Update
datastore1	227.25 GB	226.70 GB	3/9/2010 7

< ||| >

Network	Type	Num
VM Network	Standard switch network	0

## VMWare ESX Server Instances:

- 16 GB RAM (Min >=)
- 1 GB NIC's
- 6 SATA drives mirrored, or
- iSCSI SAN(s)

## Wonderware InTouch View Clients

## Virtual Server Images:

- Windows 2003 Server Enterprise (no additional cost with virtualization)
- SQL Server 2005 Standard (1, 2 & 3)
- 8 GB RAM (2)
- 4 GB RAM (5 & 6)
- 6-8 GB RAM (4 & 7)
- 2 GB RAM (1 & 3)

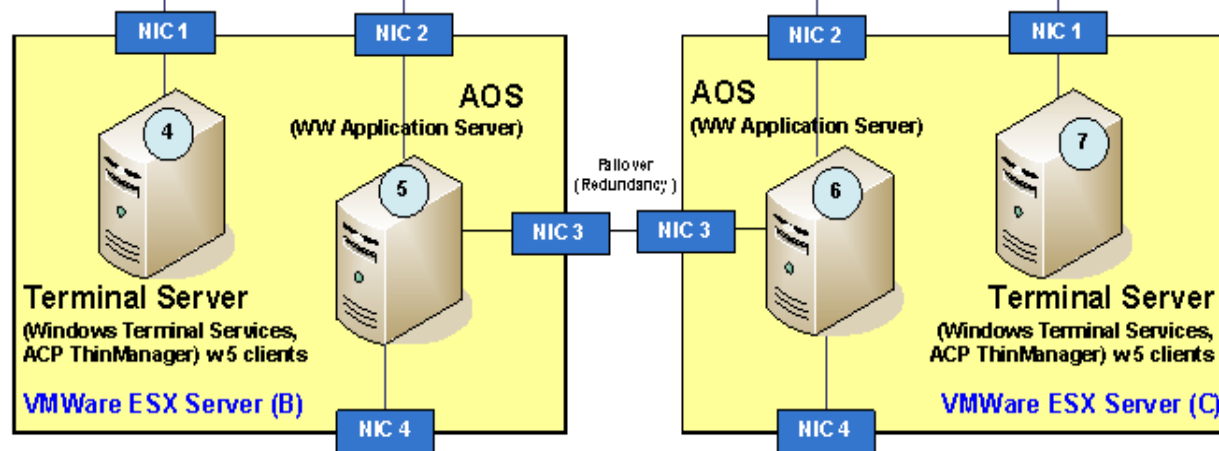

## Web Clients

## Supervisor Client(s)

## Plant Ethernet Network

## Development/Configuration Workstation

(Wonderware ArchestrA IDE, InTouch WindowMaker, Operations Configurator)

## Machine Control Network Segment

Network Switch

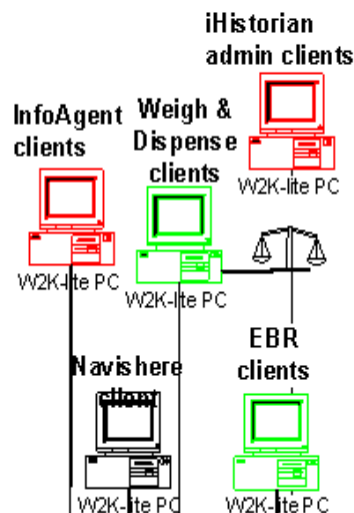

# MES Architecture

## Production site

**SAN storage**  
 - EMC Clarion CX700 or  
 HP EVA 5000,6000,8000  
 - 2 TB usable storage

**SAN storage**  
 - EMC Clarion CX700 or HP EVA 5000, 6000, 8000  
 - 4 TB usable storage

**Bunker site**

**Array Mgt Server**  
 - Compaq 380 (2) CPU  
 - Windows 2003 server  
 - Array Management Software (OVSON)  
 - Replication script control & dial-home

Real Time Data Replication

ISL

ISL

Brocade switches

Bunker Site SAN Connections to DR/QA/DEV Servers

**MES Integration Server**  
 - Compaq 380 (2) CPU  
 - Windows 2003 server  
 - MQseries  
 - ERP Gateway  
 - Palette service

**MES Database Servers (EBR & DHS)**  
 - High-Availability Cluster  
 - HP or Sun (4) CPU/ea  
 - HP-UX, Solaris or Linux  
 - Stratus 5700/Linux Redhat  
 - Oracle 9i

**Data Historian Server**  
 - Fault-tolerant server  
 - Stratus t4300 (2) CPU  
 - Windows 2003/MIS server  
 - Proficy Historian

**Wide-Area Network Data Interfaces**  
 - SAP  
 - LIMS  
 - GXP

**System Services**  
 - NTP  
 - etc.

**Firewalls**  
 - Layer 2/3 switch

**To Bunker Segment**  
 (Data collectors to iHistorian)

**Citrix servers**  
 - Compaq DL380  
 - 4 GB RAM  
 - Windows 2003 Server  
 - Citrix Presentation Server 4.0  
 \* N+1; min of two servers

**ASC Server**  
 - Compaq 380 (2) CPU  
 - Windows 2003 server  
 - RAID array storage  
 - GE Fanuc Automation Software Control (ASC)

**EBR Server**  
 - Fault-tolerant server  
 - Stratus t4300 (2) CPU  
 - Windows 2003 server  
 - Apache Web Server  
 - EBR

**Spare Server (n+1)**  
 - Compaq 380 (2) CPU  
 - Windows 2003 server

**Firewall**  
 - Layer 2/3 switch

**SCADA or DCS Nodes**  
 - Industrial PCs  
 - Compaq 380 (1) CPU  
 - Windows 2003 server  
 - iHistorian Primary & Secondary Data Collectors  
 - specialized I/O drivers and OPC servers

**InfoAgent WEB Server**  
 - Compaq 380 (2) CPU  
 - Windows 2003 server  
 - IIS Web Server  
 - Proficy Realtime Information Portal

**VMware servers**  
 - 2 Compaq 385 (4) cores  
 - VMware ESX  
 - Active Directory  
 - GIP

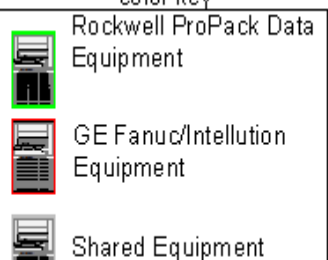

**DH+, Ethernet or other control network**

**Process & Packaging Control layer**  
 - PLC(s)  
 - DCS

Enterprise LAN 10/100/1000 Ethernet
