

Table of Contents

1	Introduction	7
1.1	Background/Overview	7
1.2	Purpose and Objectives	7
1.3	Scope	8
1.4	Structure of this Guide	8
2	Regulatory and Quality Considerations.....	11
2.1	Introduction	11
2.2	Regulatory Agencies, Directives, and Guidance.....	11
2.3	Process Definition, Critical Quality Attributes, and Critical Process Parameters	14
2.4	Commissioning, Qualification, and Validation	15
2.5	Control Strategies	15
2.6	Batch Definition.....	18
2.7	Description of Manufacturing Process and Process Controls.....	18
2.8	Biosafety	19
3	Scientific and Technical Enablers of Continuous Biomanufacturing.....	23
3.1	Introduction	23
3.2	Challenges of Continuous Biomanufacturing.....	23
3.3	Key Scientific Drivers Enabling Continuous Biomanufacturing.....	24
4	Integrated Continuous Biomanufacturing.....	29
4.1	Rationale for Integrated Continuous Biomanufacturing (CBM).....	29
4.2	Continuous Biomanufacturing Framework.....	35
4.3	Automation, Digital Infrastructure, and PAT	59
4.4	Process Development Tools for Continuous Biomanufacturing	66
4.5	Other Key Considerations for Continuous Biomanufacturing	79
4.6	The Future of Continuous Biomanufacturing	85
5	Facilities.....	91
5.1	Introduction	91
5.2	CBM Production Facilities.....	92
5.3	Manufacturing Utility and Support Systems	99
6	Process Control and Validation Strategies.....	101
6.1	Goals and Definitions.....	101
6.2	Challenges and Good Practices	102
6.3	Downstream Processing (DSP)	105
6.4	Virus Inactivation Via pH.....	107
6.5	End-To-End Process	108
6.6	Key Cross-Sectional Tools and Their Requirements to Enable Robust Control Strategies	110
6.7	Modeling and Digital Twins for CBM	116
6.8	Process Control for CBM	117
6.9	Validation of the Process and the Role of the Tools Inside of the CS	118
6.10	Getting Started Tutorial.....	128

7	Economic Justification Considerations	131
7.1	Introduction	131
7.2	Economic Factors Influencing CBM Adoption.....	131
7.3	Economic Evaluation Methodologies	134
8	Appendix 1 – Case Studies.....	137
8.1	Introduction	137
8.2	NIIMBL N-mAb Case Study	137
8.3	BioPhorum Continuous Downstream Processing for Biomanufacturing Case Study	139
8.4	Case Study Model.....	140
8.5	Analysis and Results.....	145
8.6	Conclusions	154
9	Appendix 2 – Predictive Modeling of a Continuous Process.....	157
9.1	Additional Areas for Discussion	157
10	Appendix 3 – Supplemental Technical Information.....	159
10.1	General	159
10.2	Good Practices for Raw Material Release and Media Quality Impact in Process Performance for Perfusion Processes.....	159
10.3	Good Practices for Setting Up the Feed and the Bleed Strategy for Perfusion Processes	160
11	Appendix 4 – References	163
12	Appendix 5 – Glossary.....	191
12.1	Acronyms and Abbreviations	191
